HORIZONTAL SINGLE-BLOCK DRAWING MACHINE EH

On the basis of a proven machine concept we have constantly developed this series further. Besides cold-heading wire, bearing steel, stainless steel, axle spring steel and other ferrous materials on our single-block drawing machine EH also non-ferrous materials can be processed.

A great advantage are the different capstan sizes. The quick pulling-in of the wire is ensured by a revolving pull-in dog. On request there is a choice between a manual type and a fully automatic solution. The integrated press-on rolls guide the wire torsion-free to the revolving mandrel. An optional double-mandrel increases the plant availability. On capstans with diameters between 500 and 1200mm wire with an inlet diameter between 5.5 and 50.0mm can be drawn.
