PULL-OUT CARRIAGE

The pull-out carriage has hydraulic cylinders with servo valve for precise and powerful holding of the peeled material.

The hydraulic pressure can be set from the control panel and is stored in the recipe control. Clamping jaws made of polished tool steel ensure damage-free clamping of the peeled material. The drive is done by servomotor. This allows a precise synchronization of the material transport with the slide-in device, which is also driven by servomotors.
