2-ROLL STRAIGHTENER TYPE SP FOR BRIGHT MATERIAL

The precision leveling machines can be used for the diameter range 4 to 250 mm.

They are used for straightening and polishing bars made of steel (drawn or peeled) and non-ferrous metals (cast, extruded or drawn). The height-adjustable two-roll straighteners have a fixed bottom roll and an adjustable top roll. The adjustments are carried out by motor. The adjustable components are hydraulically clamped.
